1. Abstract

Visitor Approval Entry System is a database management system designed to manage and monitor visitor entries in an organization, college, apartment, or office. Traditional visitor management methods using paper registers can be time-consuming, difficult to maintain, and prone to data loss or unauthorized access.

The proposed system provides a computerized platform for registering visitors and managing their entry approval. Visitors can provide details such as name, contact number, purpose of visit, person to meet, and date/time of entry. Authorized users can review visitor requests and approve or reject them. The system maintains visitor records, approval status, entry and exit times, and host details in a centralized database.

The system improves security by ensuring that only approved visitors are permitted entry. It also makes visitor information easier to search, update, and manage. Database features such as tables, relationships, primary keys, foreign keys, queries, and user authentication will be used to maintain data integrity and provide efficient access to records.

Overall, the Visitor Approval Entry System aims to provide a secure, organized, and efficient solution for managing visitor registration, approval, and entry records.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520080033	D.Shamika Hasini	
25200901183	M.Priyavallika	

3. Frameworks / Platforms / Software Used

- **Frontend:** HTML, CSS, JavaScript
- **Backend:** PHP / Python
- **Database:** MySQL
- **Database Tool:** MySQL Workbench
- **Development Environment:** Visual Studio Code
- **Web Server:** XAMPP
- **API:** REST
